

Cayman Airways Virtual :: What is VAFS?

VAFS or “Virtual Airline Financial Systems” is more than just an automated PIREP system for virtual airlines, much more. The VAFS client will track all aspects of a virtual airline's flight. From block out to block in the client will record everything from fuel burn and profits to how smoothly you landed! We believe that this is the best program we can use to record our operations and feel that it is the most user-friendly.

1.

You can download VAFS by clicking here; <http://www.vafinancials.com/downloads/VAFS5Setup.exe>

VISTA / Windows 7 USERS:

You MUST install as administrator and then find the VAFS.exe (NOT THE SHORTCUT) in the folder you installed the VAFS client and run the VAFS.EXE as administrator.

2.

Download FSUIPC and copy to the modules folder of either FSX or FS2004, without this file VAFS cannot log your flight!

FSUIPC for FS2004:

<http://www.schiratti.com/files/dowson/FSUIPC.zip?timestamp=060308>

FSUIPC for FSX:

<http://www.schiratti.com/files/dowson/FSUIPC4.zip?timestamp=050308>

For any questions that you may have, or if you want to see general feedback on the system that we use, please [Click Here](#)
